

Challenge 06 - Git & GitLab

For this week's challenge, you will need to work with the GitLab repository you have created for the previous week's challenge.

If you still have not finished the challenge, create a new repository, and name it **BrainsterChallenges_FirstnameLastnameGroup**.

E.g., BrainsterChallenges_AntonioStoimenovFE1.

This challenge's primary goal is to add all of your previous challenges on different branches, leaving the master branch only with the readme file.

Each of the branches will have the name as the challenge, e.g., "Challenge 01 - HTML", "Challenge 02 - CSS Intro", etc. *If you do not have completed the previous challenges, leave the branches only with the readme file.*

Create an additional branch named "Challenge06 - Git & GitLab", where you would shortly describe the workflow for finishing all of the tasks for this challenge.

Evaluation system:

- 1 point** - Create a GitLab repo with the correct name and add your collaborators (mentors) with their respective GitLab usernames;
- 3 points** - Create a branch named “Challenge 05 - Git & GitLab” where you will input the information described in the specification above;
- 5 points** - Add all of your previous challenges, leaving the master branch with the readme file only.

Deadline:

One week after its presentation, 23:59h end of the day.
